1. Terminal Disclaimer filed January 21, 2004, resubmitted April 21, 2006 has not been accepted because fees were not paid.
2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 6 and 10 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11 and 21 of U.S. Patent No. 5,663,764. '764 teaches an apparatus for encoding an image, comprising: compressing means for compressing a plurality of pixel data expressed by vectors by making pixel data fewer (claim 11, lines 4-6); classifying means for classifying the

compressed pixel data into a class (claim 11, line 17-25); memory means for storing predictive data corresponding to the class and including the pixel data expressed by vectors (claim 11, line 16); and predicting means for predicting an image using the predictive data (claim 11, lines 32-35). Although the conflicting claims are not identical, they are not patentably distinct from each other because pixel data includes red, green and blue (R, G, and B) components signals is insufficient without additionally relating the RGB components to the components discussed in the prediction limitations.

Although the claim language is not worded precisely identical to the '764, it is considered obvious because additional limitation merely asserts that a color image happens to be involved. Since color images are common in the art and even suggested in the patent, it would have been obvious to use the invention described in the Kondo patent for color image.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
